### SUBSCRIPTION RATES

The subscription price for 12 monthly issues of *Abstracts of Mycology* is \$60.00 per year, domestic and foreign prepaid. All subscriptions are on a calendar year basis only. Subscriptions should be sent to Circulation Manager with remittance (cash or check) payable to BioSciences Information Service of Biological Abstracts, 2100 Arch Street, Philadelphia, Pennsylvania 19103, U.S.A. POSTMASTER: Return Postage Guaranteed.

### CHANGE OF ADDRESS

To facilitate prompt and correct change of address and any other mailing inquiries subscribers are requested to enclose a mailing label from a wrapper of a recently received issue. The mailing label shows the subscriber's number and geographic location. This information is required to process the change quickly and accurately. All change of address requests should be sent to *Abstracts of Mycology*, 2100 Arch Street, Philadelphia, Pennsylvania 19103, U.S.A.

ABSTRACTS OF MYCOLOGY is a compilation of mycological abstracts and reference citations derived from two parent publications, BIOLOGICAL ABSTRACTS and BIORESEARCH INDEX. The Subject Index consists of permuted, keyword supplemented titles from both sources. Titles followed by numbers with the prefix 53 denote abstracts or reference citations from BIOLOGICAL ABSTRACTS; those followed by a number with the prefix 72 represent reference citations from BIORESEARCH INDEX. Information from both parent sources is included also in the Author, Biosystematic and CROSS indexes. The reprinted abstracts may be referred to in the section entitled "Abstracts" where they are arranged in the same numerical order as in BIOLOGICAL ABSTRACTS. The Bibliography section contains material reprinted from BIORESEARCH INDEX. (Note: Each issue contains abstracts from two consecutive issues of BIOLOGICAL ABSTRACTS and reference citations from one issue of BIORESEARCH INDEX.)

The Subject Index is compiled from significant words found in the author's title and the editorial addition of pertinent keywords. These words are positioned alphabetically by computer so that additional subject words both precede and follow the indexed word. However, since each column of title entries in the Subject Index is limited to 60 "characters" (letters and spaces per line), fragments of words may appear at either end of the line.

A keyword, for purposes of machine programming, is a set of characters preceded and followed by a space. On this basis, certain terms traditionally written as one compound word can be split into several elements, thereby providing multiple, meaningful information entries. A space, separating parts of names, enables each entry to be indexed separately (e.g., hypoglycemia becomes "hypo glycemia" and appears alphabetically under "h" for "hypo" and under "g" for "glycemia"). "Ribo nucleotides" and "deoxyribo nucleotides" would be ordered alphabetically under "r" and "d" and through a separation of elements both would appear under "nucleotides" thus, visually emphasizing naturally related terms. Conversely, organisms or terms commonly written as two or more words may be indexed as a unit by inserting a hyphen between parts. "*Histoplasma capsulatum*" is written "*Histoplasma-capsulatum*" to prevent the separate entry under "*capsulatum*."

Several modifying words help to locate pertinent references on the subject being searched. These modifying words appear on both sides of the keyword for each of the listings.

For example, the title, "Inhibition of mycelial growth of *Pythium graminicolum* by soil fungi," would appear alphabetically under the keywords: Inhibition, mycelial, growth, *Pythium-graminicolum*, soil, fungi. The modifying words would appear on both sides of the keyword for each of the listings.

### EXAMPLE:

		abstract or reference #
index term		
SOIL FUNGI/INHIBITION OF	MYCELIAL GROWTH OF <i>PYTHIUM-GRAMINICO</i>	52 11544
modifying phrase which precedes the index term in the author's title	modifying phrase following the index term of the author's title	

To facilitate the search, nonsignificant words are not indexed (e.g., of, by, etc.), whereas additional words are added editorially to supplement deficient titles. These

keyword additions generally pertain to the organism (common and/or specific name), drugs and their affiliations, specific types of chemicals (e.g., pesticides, carcinogens, teratogens, etc.) and their affiliations, instrumentation, methodology, geographic location and other supplementary index terms where applicable.

Certain lengthy keywords including chemicals and chemical and drug affiliations, which frequently appear in the titles are abbreviated in the Subject Index. Drugs are classified by their pharmacological effects and affiliated in abbreviated form according to the categories listed in the 17th edition of the United States Pharmacopeia. For an explanation and complete listing of all abbreviations used in the subject index, see the "Abbreviations for 1972 ABSTRACTS OF MYCOLOGY."

### Example:

		abstract or reference #
index term		
OF ASPERGILLIN-O TYPE ON	CAPILLARIES CARDIO VASC-DRUG/THE EFF	71-5875
modifying phrase	specific drug affiliation	

### Typographic Variations:

Computers printing out copy for the topical Subject Index are limited in variety of characters. There are no Greek letters, subscript or superscript numerals, symbols or punctuation marks. Consequently, the following adjustments and substitutions should be noted.

1. Chemical symbols, names of elements, radicals and compounds (with the exception of selected abbreviations such as DDT) are written out in full, as in "beta glucuronidase" for " $\beta$ -glucuronidase" and "sodium chloride" for "NaCl."

2. Superscript or subscript numerals are hyphenated as "iodine-131" for " $^{131}$ ."

3. A slash (/) indicates the end of the title and keywords and a period is used only to represent a decimal point.

4. The index is in sequence by IBM-360 collating convention. The computer alphabet follows the sequence A, A-1, A-12, A-2, AB, AB-1, etc., or A to Z. The numbering sequence 0 to 9 follows at the end of the alphabet. Numerical keywords such as 2 4-D, are indexed after the last entry under Z.

### Use:

An effective search method is to scan vertically the alphabetized topical Subject Index. When a significant word is found, glance at the nearby modifying words for further meaning and content. If interest is confirmed, note the abstract or reference citation number on the right and refer to the corresponding abstract or reference citation in the issue of ABSTRACTS OF MYCOLOGY.

In searching for abstracts or reference citations on a specific subject, it is useful to list alphabetically all possible terms (including synonyms and variants in spelling) which might apply to that subject. Vertical scanning of the index for these terms should yield pertinent abstract or reference citation numbers located in ABSTRACTS OF MYCOLOGY.

For a deeper search of the literature covered in ABSTRACTS OF MYCOLOGY, the Subject Index may be combined with CROSS and/or the Biosystematic Index. A suggested procedure for this type of search is presented in the instructions for the use of the CROSS Index, which precedes CROSS in each issue of ABSTRACTS OF MYCOLOGY.

# ABBREVIATIONS FOR 1972 ABSTRACTS OF MYCOLOGY

(The "M," "D," "G," or "P" following a plant taxon or common name indicates monocotyledon, dicotyledon, gymnosperm or pteridophyte)

ACTH	adrenocorticotrophic hormone	ITP	inosine triphosphate
A. D. (with dates)	anno Domini	IU	international units
ADP	adenosine diphosphate	KEV	kiloelectron volt (following a number only)
ADPASE	adenosine diphosphatase	KV	kilovolt (following a number only)
A.M. (with time)	ante meridiem	LD-50	lethal dose, median
AMP	adenosine monophosphate	LOG (LOG-10, LOG-E)	logarithm
AMPASE	adenosine monophosphatase	M	morpha (form; following a specific name only)
ANTI HIST-DRUG	anti histamine drug	METAB-DRUG	metabolic drug
ANTI		MEV	million electron volt (following a number only)
INFECT-DRUG	anti infective drug	MLD	minimum lethal dose
ANTI		MV	millivolt (following a number only)
INFLAM-DRUG	anti inflammatory drug	N	north (following a number only)
ANTI		NE, NW	northeast, northwest
PARASIT-DRUG	anti parasitic drug	NAD	nicotinamide adenine dinucleotide
ATP	adenosine triphosphate	NADH	reduced nicotinamide adenine dinucleotide
ATPASE	adenosine triphosphatase	NADP	nicotinamide adenine dinucleotide phosphate (TPN)
B.C. (with dates)	before Christ	NADPH	reduced nicotinamide adenine dinucleotide phosphate
BCG	bacille Calmette Guerin	NATO	North Atlantic Treaty Organization
BHC	benzene hexachloride; hexachlorocyclohexane	NMR	nuclear magnetic resonance
BTU	British thermal unit (following a number only)	PH	log of the reciprocal of the hydrogen ion concentration
CARBONIC		PHARM-	pharmaceutical-adjunct drug
ANHYDRASE		ADJUNCT-DRUG	post meridiem
INHIB-DRUG	carbonic anhydrase inhibitor drug	P.M. (with time)	pleuropneumonia-like organisms
CARDIO		PPLO	the change in the rate of a process when temperature is increased 10°C.
VASC-DRUG	cardio vascular drug	Q-10	radiation, ionizing absorbed dose (100ergs/g of irradiated material)
CDP	cytidine diphosphate	RAD	radioprotectorant drug
CENT-		RADIOPROTECT-DRUG	reticuloendothelial system
DEPRESS-DRUG	central depressant drug	RES	retardation factor (i.e., distance the unknown has traveled relative to the solvent front in chromatography)
CENT-STIM-DRUG	central stimulant drug	R-F	ribonucleic acid
CMF	cytidine monophosphate	RNA	ribonuclease
CTP	cytidine triphosphate	RNASE	south (following a number only)
2, 4 D	2, 4-dichlorophenoxyacetic acid	S	southeast, southwest
DDD	dichlorodiphenyldichloroethane	SE, SW	species (following a generic name only)
DDE	dichlorodiphenyldichloroethylene	SP, SPP	subspecies (following a specific name only)
DDT	dichlorodiphenyltrichloroethane	SSP, SSPP	vacuulating agent (papovavirus)
DEAE cellulose	diethylaminoethyl cellulose	SV-40	thymidine diphosphate
DERMATOL-DRUG	dermatologic drug	TDP	triethylaminoethyl cellulose
DFP	diisopropylphosphorofluoridate	TEAE CELLULOSE	triethylenethiophosphoramide
DIAGNOS-DRUG	diagnostic drug	THIOTEPA	thymidine monophosphate
DNA	deoxyribonucleic acid	TMP	triphosphopyridine nucleotide (NADP)
DNASE	deoxyribonuclease	TPN	reduced triphosphopyridine nucleotide
DOPA	dihydroxyphenylalanine	TPNH	thymidine triphosphate
DOPAMINE	dihydroxyphenethylamine	TTP	uridine diphosphate
DPN	diphosphopyridine nucleotide (NAD)	UDP	uridine monophosphate
DPNH	reduced diphosphopyridine nucleotide (NADH)	UMP	United Nations Educational Scientific and Cultural Organization
E	east (following a number only)	UNESCO	United States of America
ECHO	enteric cytopathogenic human orphan (virus)	USA	United States Pharmacopeia
EDTA	ethylenediaminetetraacetate	USP	Union of Soviet Socialist Republics
EPR	electron paramagnetic resonance	USSR	uridine triphosphate
F	forma (form; following a specific name only)	UTP	ultraviolet
F-1, F-2	filial generations	UV	varietas (variety; following a specific name only)
FAD	flavine-adenine dinucleotide	VAR	volume (for books only)
FAO	Food and Agriculture Organization	VOL	versus
FMN	flavine mononucleotide	VS	west (following a number only)
GASTRO		W	World Health Organization
INTEST-DRUG	gastrointestinal drug	WHO	xanthosine diphosphate
GDP	guanosine diphosphate	XDP	xanthosine monophosphate
GMP	guanosine monophosphate	XMP	xanthosine triphosphate
GMT	Greenwich Mean Time	XTP	
GTP	guanosine triphosphate		
HEMATOL-DRUG	hematologic drug		
IAA	indoleacetic acid		
IBA	indolebutyric acid		
IDP	inosine diphosphate		
IMMUNOL-DRUG	immunologic drug		
IMP	inosine monophosphate		
IR	infrared

# EXPLANATIONS OF ABBREVIATIONS USED IN BIOSYSTEMATIC INDEX

A mnemonic-type abbreviated term appears in the third column of the Biosystematic Index adjacent to each taxonomic entry. The abbreviation represents the subject heading under which the abstract or reference citation is assigned in BIOLOGICAL ABSTRACTS or BIORESEARCH INDEX and therefore indicates the type of study with which a particular taxonomic entry is concerned. Space-character requirements of the machine retrieval system used to compose and print the index make these abbreviations necessary. A complete listing of the abbreviated section headings is included for reference throughout the year. This listing will be revised and expanded when necessary and republished with each new volume.

# BIOSYSTEMATIC INDEX

The Biosystematic Index is composed of lists of taxonomic categories which are coordinated with specific subject headings and abstract and reference citation numbers published in each issue of ABSTRACTS OF MYCOLOGY. The organism(s) studied in each paper is indexed to a specific taxonomic category. Where there is a recognized disagreement over taxonomic classification, the organism is indexed under both taxonomic categories in question (e.g., the organism *Physarum* is indexed under both FUNGI-MYXOPHYTA and PROTOZOA-SARCODINA). The abbreviated notation printed adjacent to the abstract or reference citation number

represents the heading to which the abstract or reference citation has been assigned, thus, providing the user with additional information. (See "Explanations of Abbreviations Used in Biosystematic Index" which precedes this index). These abbreviations were derived to conform to the space-character requirements of the machine used to compose and print this index: i.e., NERV PATH (Nervous System, Pathology); FLOR DISTRIB (Floristics and Distribution); CV BV PATH (Cardiovascular System, Blood Vessel Pathology). An asterisk (\*) to the right of the abstract or reference citation number denotes one or more new taxa in the paper.

## INSTRUCTIONS FOR USE:

Since the primary aim of the Biosystematic Index is to provide a taxonomic entry for all the organisms mentioned in each paper and to indicate the primary field of interest of each paper, it may be used by itself or in conjunction with one, or all of the other indexes.

### Example:

If the reader is interested in studies on Myxophyta, the simplest method is to search Biosystematic Index for entries under FUNGI-MYXOPHYTA. The user should note the reference number and refer back to the actual abstract or reference citation.

[reference numbers]

Alternately, if the researcher is interested in a Myxophyta used within a specific field of study, i.e., *morphology*, the best approach is to scan the "Abbreviations Used in Biosystematic Index," which precedes the Biosystematic Index in each issue of ABSTRACTS OF MYCOLOGY, checking for the abbreviations of subject headings and subheadings which most clearly approach the user's specific area of research. Using the example presented above, the *morphology of Myxophyta*, the following subject headings and subheadings are selected as suitable:

Cytology, Cytochemistry-Plant = CYTOL PLANT

Morphology and Anatomy of Plants (includes Embryology) = PL MORPH

A check of the MYXOPHYTA entries in the Biosystematic Index reveals six abstracts or titles, (53-059760, 53-059761, 72-044357, 72-046005, 53-063989, 53-063997) whose primary field of study is one of the selected abbreviated headings and subheadings listed above. Thus, by using one index, the taxonomically-oriented user can effectively search the material published in ABSTRACTS OF MYCOLOGY.

## Combining Biosystematic Index with CROSS Index

A more intensive search of the literature published in ABSTRACTS OF MYCOLOGY can be accomplished by combining the taxonomic groupings in the Biosystematic Index with the subject headings of CROSS. For further information and a suggested procedure see the "Instructions For Use of CROSS Index" which precedes the CROSS Index.

## Combining Biosystematic, CROSS and Subject Indexes

Often, deep searches in relatively obscure fields of study require a highly sophisticated retrieval system. By combining the Biosystematic (for taxonomy), the CROSS (for subject headings) and the Subject indexes (for specific keywords), the researcher can retrieve all abstracts and reference citations pertinent to any field of study published in ABSTRACTS OF MYCOLOGY. For further information and a suggested procedure, see the "Combination of Indexes with the Subject Index" under the "Instructions for Use of CROSS Index."

# ALPHABETICAL LISTING OF SUBJECT HEADINGS THAT APPEAR IN THE CROSS INDEX

**ADIPOSE TISSUE** (see Bones, Joints, Fasciae, Connective and Adipose Tissue)

## **AERO-SPACE AND UNDERWATER BIOLOGICAL EFFECTS**

- Ecology and Psychology
- Engineering and Instrumentation
- Exobiology
- General; Methods
- Physiology and Medicine
- Space Radiation

**AGING** (see Gerontology)

## **AGRONOMY**

- Fiber Crops
- Forage Crops and Fodder
- General; Miscellaneous and Mixed Crops
- Grain Crops
- Oil Crops
- Sugar Crops
- Tobacco Crops
- Weeds and Weed Control

## **ALLERGY**

## **ANATOMY AND HISTOLOGY, GENERAL AND COMPARATIVE**

- Chordate (see specific organ systems)
- Comparative Anatomy
- Experimental Anatomy
- Gross Anatomy
- Invertebrate (see Invertebrata, Comparative and Experimental Morphology, Physiology and Pathology)
- Microorganisms (see Microbiological Ultrastructure)
- Micro- and Ultramicroscopic Anatomy
- Plant (see Morphology and Anatomy of Plants (includes Embryology) )
- Radiologic Anatomy
- Regeneration and Transplantation
- Surgery

**ANIMAL DISTRIBUTION** (includes Zoogeography)

**ANIMAL PRODUCTION** (includes Fur-Bearing Animals)

- Breeds and Breeding
- Feeds and Feeding
- General; Methods

**ANIMALS, LABORATORY** (see Laboratory Animals)

**ANTHROPOLOGY, PHYSICAL** (see Physical Anthropology: Ethnobiology)

## **BACTERIA**

- Apparatus and Methods (see Microbiological Apparatus, Methods and Media)
- Genetics (see Genetics of Bacteria and Viruses)
- Medical (see Medical and Clinical Microbiology (includes Veterinary) )
- Morphology and Cytology (see Morphology and Cytology of Bacteria)

Physiology and Biochemistry (see Physiology and Biochemistry of Bacteria)

Plant Pathogens (see Phytopathology)

Taxonomy (see Bacteriology, General and Systematic; Biosystematic Index)

Ultrastructure (see Microbiological Ultrastructure)

## **BACTERIOLOGY, GENERAL AND SYSTEMATIC**

**BEHAVIORAL BIOLOGY** (see also Psychiatry)

- Animal Behavior
- Animal Communication
- Circadian Rhythm (see Circadian Rhythm and Other Periodic Cycles)
- Conditioning
- General and Comparative Behavior
- Human Behavior

**BIOCHEMISTRY** (see also specific organ systems)

Bacteria (see Physiology and Biochemistry of Bacteria)

Biochemical Methods

- Carbohydrates

- General

- Lipids

- Minerals

- Nucleic Acids, Purines and Pyrimidines

- Porphyrins and Bile Pigments

- Proteins, Peptides and Amino Acids

- Sterols and Steroids

- Vitamins

- Tracheophyta

## **CARDIOVASCULAR SYSTEM**

- Anatomy
- Blood Vessel Pathology
- General; Methods
- Heart Pathology
- Physiology and Biochemistry

**CHEMOTHERAPY** (see also Pharmacology)

- Antibacterial Agents
- Antifungal Agents
- Antiparasitic Agents
- Antiviral Agents
- General; Methods; Metabolism

**CHORDATA, GENERAL AND SYSTEMATIC ZOOLOGY** (see also Biosystematic Index)

- Amphibia
- Amphibia and Reptilia
- Aves
- General
- Mammalia
- Pisces
- Protochordata (includes Cephalochordata and Urochordata)
- Reptilia

## **CHORDATE BODY REGIONS**

- Abdomen
- Back and Buttocks
- Extremities
- Facial

# THE CROSS INDEX

## DEFINITION AND PURPOSE:

The CROSS (Computer Rearrangement Of Subject Specialties) Index lists more than 600 subject and subsection headings of biological and biomedical interest to which the major concepts, mentioned in the research article, relate. Since the primary aim of CROSS is to coordinate (cross relate) all references in ABSTRACTS OF MYCOLOGY which are specifically or generally pertinent to a particular subject, CROSS may be used to select references which are related to any number of subject headings.

## ARRANGEMENT:

The CROSS Index contains the numbers of all abstracts and reference citations appearing in ABSTRACTS OF MYCOLOGY. These references are numerically arranged under major subject headings or subheadings. Therefore, if a given abstract or reference number relates to several subjects, it will appear under as many headings or subheadings as are necessary to index that abstract or reference properly.

For convenience in searches, the major subject headings and their respective subheadings are alphabetized with the reference numbers arranged in six vertical columns beneath these headings. The prefix numbers 53 and 72 indicate references from BIOLOGICAL ABSTRACTS and BIORESEARCH INDEX, respectively.

*Example:* Sample heading as it appears in CROSS Index:

[alphabetized major subject heading—subheading]		PHYTOPATHOLOGY—DISEASE CONTROL				[reference number]
53-096531	53-097003	53-097005	53-097007	53-097008	53-097009	
53-097010	53-097012	53-097013	53-097014	53-097015	53-097016	
53-097018	53-097027	53-101960	53-102108	53-102143	53-102160	
53-102182	53-102280	53-102281	53-102282	53-102283	53-102285	
53-102288	53-102294	53-102295	72-102297	72-102298	72-102300	
72-102301	72-102302	72-102303	72-102304	72-102308	72-102311	
72-102312	72-102313	72-102314	72-102315	72-102316	72-102317	

## INSTRUCTIONS FOR USE:

References located under a given CROSS heading may be compared with those under one or more other headings. The selection of identical reference numbers appearing under more than one subject heading would result in the retrieval of abstracts and titles containing references relative to the several headings.

*Example:*

If the reader desires all references concerned with a *cytogenetic study of RNA metabolism in fungi*, the search method would be as follows:

1. Scan the "Alphabetical Listing of Subject Headings which Appear in the CROSS Index." This section precedes the actual index.
2. Determine the specific subject headings which are relevant to the study being searched (i.e., those factors which are absolutely necessary to obtain the information desired). In the following example, the most pertinent subject headings are:

Genetics and Cytogenetics—Plant  
Metabolism—Nucleic Acids, Purines, Pyrimidines  
Plant Physiology—Metabolism

3. To facilitate the search, start with the subject heading which contains the *least* number of entries. Match the reference numbers listed under this subject heading against the other specific headings which have been selected. In the example given, the subject heading with the least number of entries is "Metabolism-Nucleic Acids, Purines, Pyrimidines." The reference numbers retrieved from this correlation are then compared with "Genetics and Cytogenetics-Plant" and "Plant Physiology-Metabolism." The reference numbers which match—53-064333, 53-064381, 53-065175, 72-044821, and 72-046005—contain information relevant to the subject under study (i.e., pertinent to all three subject headings).

[arrows indicate those reference numbers  
which appear under all of the  
preselected subject headings]

4. By selecting only those reference numbers which appear under each subject heading, the searcher is assured of retrieving only those references which are precisely concerned with the subject being investigated. In the case of the hypothetical example being discussed, the searcher would retrieve all abstracts specifically related to a *cytogenetic study of RNA metabolism in fungi*.

# COMBINING CROSS INDEX WITH BIOSYSTEMATIC INDEX

A more intensive search of the material published in ABSTRACTS OF MYCOLOGY can be undertaken by using the taxonomic groupings in the Biosystematic Index, which directly precede the CROSS Index in each issue of ABSTRACTS OF MYCOLOGY. For example, if the reader desired to narrow the search to *a cytogenetic study of RNA metabolism in fungi* (as outlined previously) to a specific taxonomic group, e.g., BASIDIOMYCETES, this search could be accomplished quickly and easily by turning to the Biosystematic Index and checking the reference numbers listed under FUNGI-BASIDIOMYCETES against those reference numbers previously obtained from searching the CROSS Index. The reference numbers that appear under both FUNGI-BASIDIOMYCETES in the Biosystematic Index and under the pertinent subject headings under CROSS will contain the precise factors sought (i.e., *a cytogenetic study of RNA metabolism in Basidiomycetes*).

## Suggested Procedure:

1. List the reference numbers retrieved from the CROSS Index and compare them with the reference numbers listed under FUNGI-BASIDIOMYCETES in the Biosystematic Index.
2. Check the reference numbers which appear under both the pertinent subject headings in the CROSS Index and under FUNGI-BASIDIOMYCETES in the Biosystematic Index.
3. Disregard those reference numbers which do not appear in both the CROSS and Biosystematic Index.

The reference numbers retrieved from the CROSS Index are:

53-064333	←	[arrows indicate those reference
53-064381	←	numbers which appear under the
53-065175		Biosystematic Index and also
53-044821		under all the subject headings
72-046005	←	searched in CROSS.]

Because the reference numbers **53-065175** and **72-044821** are not indexed under the taxonomic group FUNGI-BASIDIOMYCETES, they should be disregarded.

4. The reference numbers which remain (i.e., **72-046005**, **53-064333** and **53-064381**) are certain to contain the information the user desires.

#### COMBINATION OF INDEXES WITH THE SUBJECT INDEX

Still greater usefulness of ABSTRACTS OF MYCOLOGY can be achieved by using the CROSS Index in combination with the Biosystematic and Subject indexes. A combination of selected key-terms from the Subject Index with specific subject headings in CROSS may be used to locate information on various interrelated subjects.

##### *Suggested Procedure:*

1. List all the potential, significant keywords to be searched in the Subject Index and the appropriate subject headings to be searched in the CROSS Index.
2. Search the Subject Index for these preselected key-terms and scan the adjacent, modifying terms for further meaning and content. If interest is confirmed, note the reference number to the right.
3. Check each of the preselected subject headings under the CROSS Index.
4. By referring only to those reference numbers which appear under all of the preselected subject headings in CROSS and which follow significant keywords in the Subject Index, the researcher will obtain information specifically concerned with his field of study.

If the study emphasizes specific organisms, the researcher may then turn to the taxonomic groupings in the Biosystematic Index which will lead to reference numbers pertaining to organisms which may be of interest in specific applications. These specific applications or fields of interest can be selected by comparing the reference numbers under the Biosystematic Index with those appearing under appropriate section or subsection headings in CROSS, and with those listed following selected, alphabetically indexed keywords in the Subject Index. By using only those reference numbers which appear in all three indexes, the search is progressively narrowed to specific papers pertinent to the defined interest of the searcher.
